

RPA AS A SERVICE

Robotic Process Automation (RPA) is an automation tool used to handle routine repetitive tasks that are often tedious and time-consuming for employees. If you have already decided to introduce the robotic automation of your business processes into your company, the next thing you have to decide is whether the installation will be on-premise or as a service (aaS).

WHEN IT MAKES MORE SENSE TO USE RPA AAS?

- If you don't have a large IT department.
- If, for capacity reasons, your employees cannot manage the process.
- If you want to leave the entire process automation management to the experts and focus on your core business.
- If the process to be automated does not require a 24/7 operation.

In the case of RPA as a Service, i.e., when the service is outsourced, the robot that we create will remotely connect to your business environment within specified time windows. It will securely process the tasks specified by you directly in your environment and then disconnect once the job is done. You do not have to worry about licensing and technical support for the whole process.

WHY YOU DON'T HAVE TO WORRY ABOUT SECURITY WITH RPA AAS?

- The processes are processed in compliance with GDPR, PCI-DSS, SOX, and HIPPA standards.
- Our security is certified (ISO 27001, ISO 9001).
- Before launching the production operation of RPA, the entire process is thoroughly tested.
- Any sensitive data is processed within your system.
- All steps are transparent, and you can check them at any time.

WHAT ARE THE BENEFITS OF RPA AAS?

COMPREHENSIVE REPORTING

Even though the service is outsourced, you have a nonstop overview of all the robot's activities and interventions. You can check it and monitor its performance at any time.

SECURITY

The actual processes run within your company, so you don't have to worry about sensitive information leaks. The data the robot works with does not leave your environment.

SCALABILITY

No additional recruitment is required as the volume of output increases. Only the volume of licenses will increase.

COST SAVING

RPA is highly cost effective. When it is outsourced, you do not lose track of the process. On the contrary, you can check it at any time.

ALWAYS UP TO DATE

With RPA aaS you don't have to worry about constant and often costly, time-consuming, and labour-intensive system upgrades. We will do everything for you.

PROFESSIONAL SERVICE

The whole process is handled by trained professionals.

SOITRON, s.r.o., member of SOITRON Group

Soitron is a Central European integrator operating in the IT market since 1991. The company's philosophy is to constantly move forward, and that is why it is a leader in implementing unique technologies and innovative solutions. It offers its clients products and services in the field of robotization and process automation, artificial intelligence, the Internet of Things (IoT), IT infrastructure, communication and cloud solutions, IT security, IT services and outsourcing, IT advisory and applications, and IT department digitalization.
